INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/CA 03/01624

 Basis of t 	he report
--------------------------------	-----------

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	De	scription, Pages	•
	1-1	9	as originally filed
	Cla	ims, Numbers	
	1-3	3	filed with telefax on 09.09.2004
	Dra	wings, Sheets	;
	1/2-	-212	as originally filed
2.	Wit lang	h regard to the langu guage in which the in	age, all the elements marked above were available or furnished to this Authority in the ternational application was filed, unless otherwise indicated under this item.
	The	ese elements were av	railable or furnished to this Authority in the following language: , which is:
		the language of a tra	anslation furnished for the purposes of the international search (under Rule 23.1(b)).
		the language of pub	lication of the international application (under Rule 48.3(b)).
		the language of a tra Rule 55.2 and/or 55.	anslation furnished for the purposes of international preliminary examination (under 3).
3.	With inte	h regard to any nucl e rnational preliminary	ectide and/or amino acid sequence disclosed in the international application, the examination was carried out on the basis of the sequence listing:
		contained in the inte	rnational application in written form.
		filed together with th	e international application in computer readable form.
		furnished subsequer	ntly to this Authority in written form.
		furnished subsequer	ntly to this Authority in computer readable form.
		The statement that t in the international a	he subsequently furnished written sequence listing does not go beyond the disclosure application as filed has been furnished.
		The statement that t listing has been furn	he information recorded in computer readable form is identical to the written sequence ished.
4.	The	amendments have r	esulted in the cancellation of:
		the description,	pages:
		the claims,	Nos.:
		the drawings,	sheets:

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

5.	This report has been established as if (some of) the amendments had not been made, since they have
	been considered to go beyond the disclosure as filed (Rule 70.2(c)).

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N) Yes: Claims 1-17,19-23

No: Claims 18,24-33

Inventive step (IS) Yes: Claims 1-17,19-23

No: Claims 18,24-33

Industrial applicability (IA) Yes: Claims 1-33

No: Claims

2. Citations and explanations

see separate sheet

EXAMINATION REPORT - SEPARATE SHEET

1. The Prior Art

D1: LUCAS, STEPHENS, GREULICH: "The Effect of Reinforcement Stability on Composition Redistribution in Cast Aluminium Metal Matrix Composites" MATERIALS SCIENCE AND ENGINEERING, no. A131, 1991, pages 221-230, XP002270490 USA

2. Article 19 PCT

Claim 28 suggests that a cast composite having 10-25% vol B₄C particles that contains at least 0.2% Mg will exhibit substantially no aluminium carbide particles at the surfaces of the refractory particles (B₄C). This is however not supported by the description which states on page 19 that (referring to example 5) that figure 3 which represents the composite material with no Ti added shows substantial attack on the B4C and reacted aluminium carbide crystals are evident. Figure 4 however, which represents the composite material with 1%Ti, shows less attack on the particles. Thus it is concluded that Ti must be present in order to prevent attack of the particles and hence the formation of aluminium carbide.

2. Claims 1-23 - A Method of Manufacture

None of the prior art discloses a method of manufacture that contains all of the features as given in claim 1. Accordingly, the subject matter of claim 1 and the dependent claims 2-17 and 19-23 are novel.

D1 concerns B₄C reinforced Al alloys and describes a method of manufacture that consists of:

- i. A method of preparing a cast A356 alloy AI matrix composite consisting of:
 - melting of the A356 Al matrix alloy which has a composition 7% Si, 0.35% Mg, 0.2% Ti, balance Al.
 - adding 25% vol% B4C particles to a melt of said alloy

INTERNATIONAL PRELIMINARY

International application No. PCT/CA 03/01624

EXAMINATION REPORT - SEPARATE SHEET

- mechanically stirring mixture to promote wetting
- stir casting

ii. A final product which is the said alloy reinforced with 25% vol B_4C particles in the form of bars. (See p. 222-223 and tables 1 and 2)

The difference between the method described in claim 1 with that disclosed in D1 is that the Mg content of the alloy is kept at below 0.2% at least until the said volume fraction of B_4C composite particles are distributed throughout the volume of the melt. The effect of this process step is to ensure that sufficient fluidity is maintained for casting.

Starting from D1, none of the available prior art indicates that the fluidity of the molten composite mixture of D1 could be improved by maintaining a low Mg level until after the B_4C particles are evenly distributed within the molten alloy. Accordingly, the subject matter of claim 1 and the dependent claims 2-17 and 19-23 are inventive.

Claim 18 is written as an independent claim for a method whereby the fluidity is maintained by addition of 0.2-5% wt. of Ti. D1 discloses all the features of claim 18 and therefore the subject matter of claim 18 lacks novelty (Article 33(2)PCT).

2.1 Claims 24-33 - A Cast Composite

D1 discloses a cast composite product that consists of an Al 356 matrix having the composition 7.0% Si, 0.35% Mg, 0.2%Ti, 0.15% Fe and the balance Al, which contains 25% vol of B_4C particles. Additionally it is disclosed that the Ti forms stable compounds, namely Ti boride compounds around the surface of the B_4C particles.

Accordingly, the subject matter of claims 24,26-27,29-33 lack novelty with respect to D1.

The subject matter of claim 25 would not appear to contain anything that could be considered new and inventive as the invention relates to the control of the Mg content during processing and to the Ti content of the melt.
